

TRIKE TIPS

What if the Wright Brothers had started with 3 wheels?

Another trike theft I already reported on the 2 local trikes stolen & I just received word out of Tacoma Washington about a blue Ice Adventure stolen from in front of their apartment complex even though it was secured to a cement block. So this issue will be making suggestions to minimize your risk, taking steps to aid in recovery & above all at least make your trike less of a target.

Trike Security - Here are some simple steps to take to help prevent losing your trike.

Garage 529 - Is a free registration service that keeps your trike serial number & photos on file and makes the information available to Police Departments across North America. The easy steps required to join can be completed online & you will receive a unique registration decal to help deter would be thieves. - <https://project529.com/garage/tour>

Brake Locks - If someone cuts your cable lock they can ride away on your trike so these Disc Brake Locks are a little extra piece of security. Available in Red, Black or Blue for about \$6. ea. plus postage to your home - <https://www.youtube.com/watch?v=R6IEL887ZDQ>

Bike Alarm - Everyone ignores alarms, right? Maybe, but how often have you heard an alarm go off in front of a store entrance? What I like about this one is it has a remote control & a suggested 6 month battery life which may be 3 months in real life + 113 decibels. Pretty hard to ignore if you are a thief. About \$20. plus postage. - <https://www.youtube.com/watch?v=nHOloGZS82I>

Schwalbe Trykers are no longer in Production. If you need a tire or two for spares have your local bike shop check with the Renton, Wa. Schwalbe Warehouse as there are less than 100 units left.
